RAO WALEED

Full-Stack Developer | Python, Django, React, TypeScript | Multi-Tenant SaaS

Lahore, Pakistan (UTC+5), open to remote | raowaleed.codemachine@gmail.com

linkedin.com/in/rao-waleed-0204922a5 | github.com/raowaleed10

PROFESSIONAL SUMMARY

Full-Stack Developer with 3+ years building and running production SaaS on Django and React. Takes products end to end, from PostgreSQL schema design through API contracts and React frontends to deployment, with a track record of root-causing live production incidents. Recent work is multi-tenant, AI-integrated B2B platforms built with strict tenant isolation and security.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL

Backend: Django, Django REST Framework, Django Channels, Celery, FastAPI, REST API design

Frontend: React, Next.js, TypeScript, Redux Toolkit, RTK Query, ReactFlow, Tailwind CSS, Vite

Data: PostgreSQL (indexing, query tuning, production-safe migrations), Redis, pgvector

AI / LLM: Anthropic Claude API, OpenAI API, LangChain, RAG pipelines, sentence-transformers

Security & Auth: OAuth2 / OIDC, JWT with refresh-token rotation, RBAC, HMAC signature verification, Fernet encryption

Infrastructure & Testing: Docker, Nginx, Gunicorn/Uvicorn (ASGI), GitHub Actions CI/CD, AWS, Linux, Sentry, pytest

Integrations: Stripe, Shopify Admin API, Freshdesk, Gorgias

PROFESSIONAL EXPERIENCE

Full-Stack Developer, Xtreeme Tech, Lahore **Feb 2026 – Present**

- **Delivery throughput:** Ship AI-integrated B2B products end to end on Django 5 and React 19, 7 delivered in 7 months, owning API contracts, PostgreSQL schema design, async workflows, and deployment on each.
- **Solo and team delivery:** Build some products alone from an empty repository through to production, and work with a product team on the larger platforms such as UChatbots and ExcevoAI.
- **Tenant isolation:** Keep client data strictly separated across 30+ models using scoped querysets, RBAC, and Fernet-encrypted connector credentials, with per-tenant HMAC webhook routing that avoids a full-table credential decrypt.
- **Async infrastructure:** Move historical backfills, scheduled jobs, and outbound webhook delivery into Celery and Redis pipelines with exponential-backoff retry, keeping request paths fast under load.
- **Engineering standards:** Gate every merge behind a 337-test suite (pytest, factory-boy) in GitHub Actions, deploying via Docker with OpenAPI docs and Sentry monitoring that catches errors before customers report them.

Junior Python Developer, Code Todo (Remote) **Sep 2024 – Oct 2025**

- **API delivery:** Built the DityTruck backend from scratch: 15+ Django REST Framework endpoints powering a production truck-rental marketplace, working in a small team under a team lead.
- **Query performance:** Cut endpoint response times by 40% by designing the PostgreSQL schema around real access patterns, adding targeted indexes, and restructuring the heaviest queries on live customer traffic.
- **Automation:** Built 3 Playwright and Selenium scrapers aggregating 500+ listings daily from three sources, and automated the reservation flow on those sites with Selenium WebDriver, removing hours of manual work each week.
- **Security:** Secured the admin panel with JWT authentication and role-based access control over sensitive operational data.
- **Deployment:** Deployed and ran the stack on Ubuntu with Nginx and Gunicorn, handling releases and production support.

Freelance Full-Stack Developer, Self-Employed, Lahore **Jun 2023 – Sep 2024**

- **Sole engineer:** Delivered custom web systems end to end for local businesses (inventory management, booking, admin dashboards) on Django/DRF with React frontends, including authentication, role-based admin panels, and payment and email integrations.
- **Automation and operations:** Replaced hours of repetitive client data entry with Python scripts, scrapers, and scheduled jobs, and deployed on Linux VPS environments with Nginx and Gunicorn.

SELECTED PROJECTS

UChatbots, Multi-Tenant AI Chatbot Builder SaaS (Xtreeme Tech) **app.uchatbots.com**

- Built a multi-tenant chatbot SaaS from zero to production with a product team, now running on 8 live customer sites: 82 REST endpoints plus WebSocket across a 10-app DRF backend and a pnpm/Turborepo monorepo.
- Designed multi-provider AI orchestration that keeps the product serving when a single vendor fails, and deducts user credits atomically under concurrency.
- Built a visual flow editor in ReactFlow (11 node types, including an autonomous ReAct agent) and a runtime engine supporting multi-turn pause/resume via serialized execution state.
- Implemented Stripe subscription billing and PaymentIntent credit purchases, and migrated Google auth from a client-side id_token to a server-side OAuth2 authorization-code flow for stronger XSS resistance.
- Engineered the client auth layer: a queue-based Axios token-refresh interceptor and BroadcastChannel cross-tab session sync.
- Recovered 4 broken production paths, including corrupted saved flows from a ghost-edge bug and new signups landing with zero credits from an OAuth/billing race condition.

ExcevoAI, Multi-Tenant AI Customer Support Platform (Xtreeme Tech) **ai.excevo.co.uk**

- Built a multi-tenant support platform (DRF, React 19, TypeScript) with a product team, integrating Freshdesk and Gorgias, with AI-generated ticket replies through the Anthropic Claude API and LangChain.
- Delivered the platform first as a private portal for Axparis, where a support team of 10+ agents uses it daily on Freshdesk; the multi-tenant version is now live with pilot customers.
- Designed a per-client RAG knowledge base on pgvector with sentence-transformers embeddings and a document approval workflow feeding reply generation.
- Engineered Shopify order integration with webhook-driven real-time capture plus an async Celery historical backfill.
- Root-caused a live webhook-routing failure against Shopify's canonical domain API after a store rename, restoring order capture for the affected tenant.
- Shipped a multi-stage AI guardrail engine that blocks risky automated commitments such as unverified refund promises, and escalates ambiguous cases to human review.

Accountabuddy, Real-Time Virtual Coworking Platform (Xtreeme Tech) **app.accountabuddy.net**

- Sole engineer, building a live-video coworking product (DRF, React, Redux Toolkit) with auto-paired sessions and real-time synchronized timers over Django Channels and a custom WebSocket client.
- Restored the core feature after 100% of live sessions began dropping five seconds after connect, tracing the fixed interval to an unconfigured Redis socket timeout in channels_redis rather than application logic.
- Ended silent double-charges for live paying subscribers across 3 Stripe subscription tiers by fixing a webhook parsing bug and making event handling idempotent against provider retries.
- Automated session pairing, reminder emails, and nightly calculations with Celery and django-celery-beat, deployed via Docker Compose, Nginx, and Uvicorn ASGI workers.

EDUCATION

BS in Computer Science, University of Central Punjab, Lahore **Mar 2022 – Feb 2026**

- Graduated Feb 2026. Completed the final semester as a full-time student between roles, Nov 2025 to Jan 2026.
